

System S&P[®]
The Natural Wheel
Compact Module Sewage Plants

Additional Technology

Additional Technology

At **System S&P GmbH**, we are able to provide our customers with any additional technology necessary for installing and operating their sewage plants.

This includes pumping equipment, throttling valves, flow dividers, instrumentation and control equipment, dosing systems for phosphate precipitation and lime dosing, systems for filtration and disinfection, and technology for sludge treatment.

This is made possible by a well-developed network of engineering offices and supply and disposal specialists, as well as strong working relationships with the regulatory authorities and well-known research institutions.

Special emphasis is placed on continuous product development. Feedback from sewage plant operators and other customers provides the inspiration for practical solutions.

As a result, our clients' custom-designed plants profit from the latest innovations.
